

Powered Roller Conveyor

03

- Continuous and controlled transport of products and materials
- High reliability for intensive applications
- Modular structure for easy integration

Description

Powered Roller Conveyors provide an ideal solution for stable and modular transport of pallets, packages, and components in production lines or automated warehouses. Modules can be arranged in linear, curved, or complex configurations and integrated with transfer modules, rotating tables, vertical lifts, and other automated systems. Thanks to modular design and adjustable motorization, these conveyors ensure efficiency, flexibility, and load safety, supporting continuous product flow even in high-density handling environments.
