

Belt Conveyor

04

- Smooth and continuous handling
- Robust modular structure
- High reliability in intensive working cycles
- Easy integration with automation systems

Description

Belt Conveyors are designed to provide continuous and uniform transport of packages, boxes, components, and various types of products.

Manufactured using robust and modular materials, they offer flexibility in width, length, and belt surface configurations, allowing transport of both light and heavy loads with maximum safety and reliability.

Thanks to compatibility with sensors, PLCs, and automation systems, Belt Conveyors can be integrated into packaging, assembly, and transfer lines, optimizing production flow.
