

Belt Conveyor with Part Rotator

06

- Continuous transport via motorized belt
- Integrated part rotator for product orientation up to 360°
- Sensors for precise part detection and rotation
- Compact module reducing cycle time and footprint

Description

The Belt Conveyor with Part Rotator is designed to handle and rotate products quickly and accurately during transport. The integrated rotating unit allows rotation up to 360° directly on the conveyor line, eliminating the need for additional stations. Compact, reliable, and easy to integrate, this system ensures high efficiency and precise product orientation across different industrial sectors.
