

Automated Panel Handling Line

08

- Automatic panel handling
- Integrated panel manipulator for pick and place operations
- Operational safety and reduced damage risk
- Easy integration with production equipment

Description

The Automated Panel Handling Line with integrated manipulator is designed for precise transport and positioning of panels along the production process.

The robotic manipulator allows panels to be handled without manual intervention, ensuring efficiency, safety, and reduced cycle times.

The system is suitable for various panel sizes and types, optimizing production flow while minimizing damage and positioning errors.
